Application	Description	Key Benefit
Abdominal Sculpting	Targets rectus abdominis and oblique muscles to carve out a defined “vest line” or six-pack appearance.	Non-invasive muscle definition without strenuous exercise; visible after 4 sessions.
Gluteal Lifting & Enhancement	Focuses on gluteus maximus and medius to lift and firm the buttocks, creating a peach-shaped contour.	Achieves noticeable lift and volume without surgery or fillers.
Arm Toning & Strengthening	Tightens biceps and triceps to combat sagging, resulting in more sculpted and youthful upper arms.	Quick, painless alternative for clients who find targeted arm exercises challenging.
Thigh Contouring & Firming	Sculpts quadriceps, hamstrings, and inner thighs, reducing circumference and improving leg shape.	Efficiently combines fat reduction with muscle toning for streamlined legs.
Postpartum Core Restoration	Specifically helps close diastasis recti by strengthening deep abdominal muscles, supporting postnatal recovery.	Safe, non-invasive method to restore core integrity and reduce waistline.
Chest Definition (Male)	Develops pectoral muscles for a stronger, more defined chest appearance, appealing to male clientele.	Builds muscle density in a difficult-to-target area without heavy weight training.
General Muscle Maintenance	For clients unable to exercise regularly (due to time, injury, or aging), maintains muscle mass and metabolic rate.	Prevents muscle atrophy and supports long-term weight management.
Pre-Event Body Tuning	Rapid sculpting for special occasions, delivering visible tightening and toning within two weeks.	Provides confidence-boosting results with no recovery time.

Parameter	Specification
Model	BL-610
Technology	HIEMT (High-Intensity Electromagnetic Muscle Training)
Magnetic Vibration Intensity	7 Tesla
Effective Penetration Depth	8 cm
Input Voltage	AC 110V-230V
Output Power	300W - 5000W
Output Frequency	3 - 200 Hz
Fuse	20A
Host Dimensions	46 x 60 x 105 cm
Flight Shipping Case Dimensions	56 x 66 x 116 cm

Parameter	Specification
Weight	Approx. 78 kg
Handle Configuration	Dual, independently adjustable
Session Duration	30 minutes
Max Contractions per Session	30,000
Certifications	FDA, CE
